

FERALPI STAHL

More than Steel.

FERALPI STAHL

More than Steel

WELCOME to FERALPI STAHL

STEEL REIMAGINED:

SUSTAINABLE. INNOVATIVE. FOR GENERATIONS

Since 1992, we at FERALPI STAHL as part of the international Feralpi Group have been carrying on the steelmaking tradition in Riesa, while steering it towards a green future. With around 900 dedicated employees at our site, we are united by a clear vision: **We produce high-quality structural steel with respect for the people and the environment.**

CIRCULAR ECONOMY AS DRIVING FORCE

As a steel mill of the secondary route, we produce our reinforcing steel using over 98 percent recycled material. Sustainability and quality are the future of the construction industry.

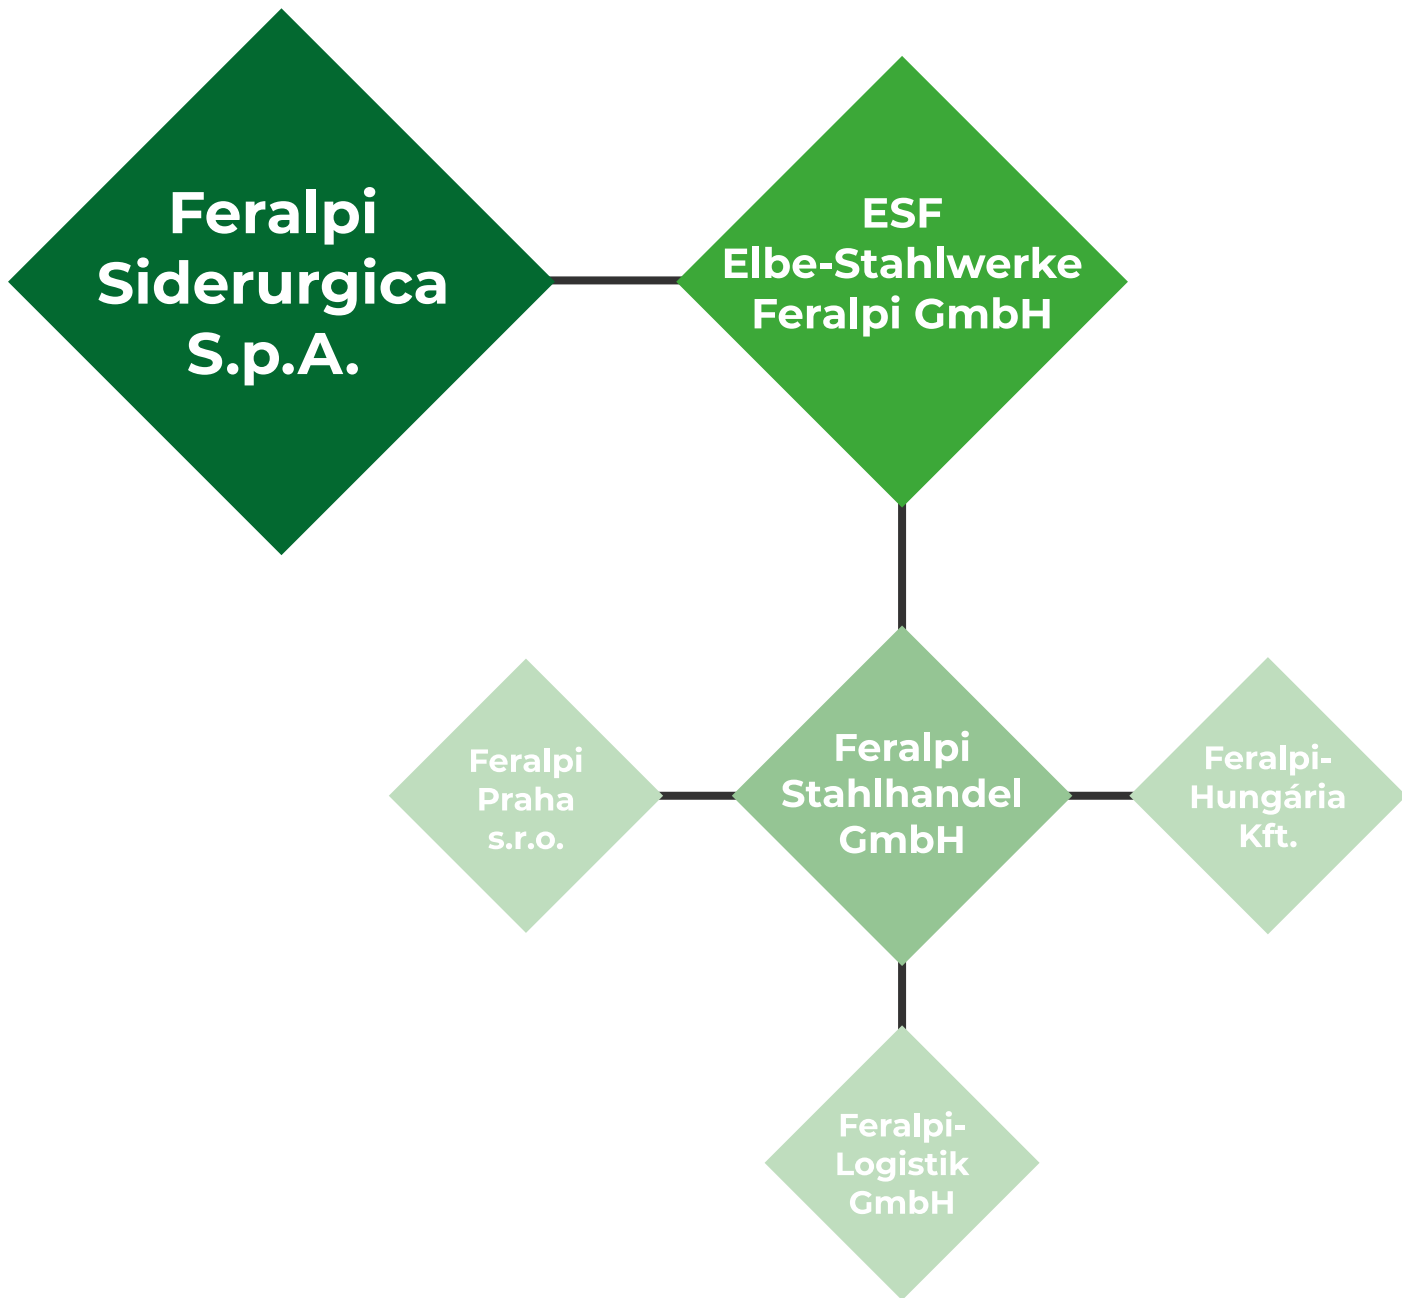

For several years, the Feralpi Group has been investing more than 220 million Euros in its Riesa facility as part of its green transformation. At the heart of these investments is the new rolling mill, which is Scope 1 emission-free, which was inaugurated in 2025 and features, among other things, an induction furnace line.

FERALPI STAHL stands for robust diversity, deep-rooted tradition, and technological innovations that pave the way toward a climate-neutral future.

The background of the image consists of three horizontal layers of perforated metal mesh. The top layer is blue, the middle layer is green, and the bottom layer is blue. The layers are separated by dark grey horizontal bars. A white diagonal shape cuts across the right side of the image. The text 'CORPORATE STRUCTURE' is written in white, bold, uppercase letters across the top two layers. A solid green horizontal bar is positioned below the text, overlapping the green layer.

ment products**

OUR PRODUCTS – THE FUTURE IS BUILT ON STEEL

Steel is much more than just a material. It is the backbone of our constructed world. With its exceptional strength, durability and versatility, it forms the essential foundation for countless construction projects and essential infrastructure – from residential buildings and industrial facilities to major infrastructure projects.

At FERALPI STAHL, we produce around 1 million tonnes of high-quality reinforcing steel for the construction industry every year. In doing so, we take responsibility: we think in terms of circularity and manufacture our products from recyclable steel scrap. By using state-of-the-art production processes, we transform yesterday's materials into tomorrow's building materials. This way, we make an active contribution to the circular economy, conserve natural raw materials and enable sustainable construction.

HISTORICAL DEVELOPMENT

750
Employees

2022

Groundbreaking Ceremony
for the New Spooler Rolling Mill
& Other Investment Projects

2023

Inauguration of the
Scrap Processing Plant
Phase 1

2013

Saxony Environmental
Award for Environmentally
Friendly Technologies and
Production Processes

2025

Commissioning of a new substation
(featuring an environmentally friendly
blueGIS system without SF6)

2008

First environmental
certification

A detailed close-up photograph of a green leaf, showing a complex network of veins. A prominent central vein runs vertically down the middle, with several secondary veins branching out at an angle. The leaf's surface is covered in a fine, intricate pattern of tertiary veins, creating a grid-like texture. The color is a vibrant green, with some darker and lighter variations across the surface. A few small, light-colored spots are visible on the leaf. The right edge of the leaf is cut off by a white background.

FERGreen

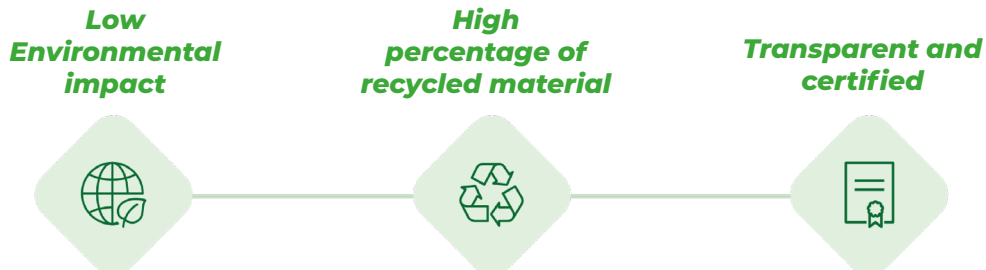

OUR JOURNEY TO GREEN STEEL

A commitment we have been upholding for more than 20 years.

With FERGreen, the Feralpi Group offers an innovative product line for the construction industry that combines the highest quality, technological advancement, and a commitment to sustainability. FERGreen represents EPD-certified steel products with a measurably lower environmental footprint and reflects our comprehensive commitment to environmental, social, and responsible corporate governance.

For over 30 years, we have been committed to resource-efficient steel production using electric arc furnaces at our Riesa facility.

The result: CO₂ emissions reduced by more than 80% compared to conventional primary steel production in a blast furnace.

CERTIFICATIONS

We set the standard: FERALPI STAHL has been continuously certified under the strict European environmental management system EMAS since 2012—as one of only two electric steel mills in all of Germany.

A clear sign that our commitment goes far beyond legal requirements.

Our vision is clear: FERGreen stands for transparency and responsible business practices—and for sustainable partnerships in the construction industry.

SOCIAL ENGAGEMENT

RESPONSIBILITY FOR THE REGION AND THE LOCAL COMMUNITY

Ever since the Feralpi Group was founded in Italy in 1968, the guiding principle of our founder, Carlo Nicola Pasini, has shaped our business practices: **“Manufacturing and growing while respecting people and environment.”**

Deeply rooted in Riesa. As a long-established company, we take social responsibility for our local community and are actively involved in the fields of education, culture, social welfare, and sports through long-standing partnerships.

Experience and foster a sense of community. A prime example of this is our immediate neighborhood in the Gröba district. Here, we bring people together—for instance, at our annual family festival, “Bella Gröba.”

Knowledge transfer for the steel production of tomorrow. To continuously optimize our processes, we rely on a strong regional network of educational and research institutions. To this end, we maintain close partnerships with the Technical University of Freiberg, the Saxony Cooperative State University in Riesa, and the Technical University of Dresden.

KEYFACTS

**900 employees
from
24 countries**

**over 220 million
Euros in investment
from internal
funds**

**80%
lower Scope
1 & 2 emissions**
compared to conventional
manufacturing

**26 tractor-trailers
in our
Feralpi Logistics**

**approx. 1,600 degrees
melting point**

**in 2.5 hours
from scrap to
finished product**

**over 300 m
conveyor length**

6 EPDs

**up to
126 km/h rolling
speed in our new
rolling mill**

**18 km/h transfer
speed in the
new conveyor**

**approximately
1 million tons
of steel products
per year**

**98.6% minimum
recycling rate**
